Press Release

“DROMEAS - Technology, design, economy times two”

The new desks of the TETRA series, as part of a wider company strategy of developing and producing new competitive and quality wise products with the use of new technology and raw materials. The rectangular steel frame and the clean lines in design are the two basic characteristics of the TETRA desk series

The TETRA desk series is distinguished by its ergonomics, its high aesthetics, its competitive prices, its wide selection of colors and dimensions, as well as, its adaptability to working spaces of every nature and level.

The materials of the TETRA desk series and more particularly the working surfaces, meet the criteria and specifications of the PEFC STANDARDS for the Sustainable Management of Forests. Following these procedures, a company helps protecting local societies and future generations, avoiding uncontrolled destruction of wild forests, monitoring and tracking the quality and origin of the raw material.

The cleverly designed die cast junctions of the desks of the TETRA series makes it ideal for the creation of multiple working stations, meeting, thus, the today's requirements of businesses for open working spaces.
